

## HP836IV 8 in 1 AV to ISDB-T Encoder Modulator

### 1.Outline

HPS836IV 8 in 1 SD encoder modulator is a professional SD audio & video encoding and multiplexing device with powerful functionality. It has 8 channel CVBS input interfaces, supporting MPEG2 code format. This device can simultaneously encode 8 channel SD programs; moreover, it has an ASI input and can multiplex the input TS with the 8 encoded SPTS to generate a MPTS output. Also, the PSI/SI information can be inserted into SPTS output. In conclusion, its high integrated and cost effective design makes the device widely used in varieties of digital distribution systems such as CATV digital head-end, satellite and terrestrial digital TV, etc.

### 2.Specifications

Input	8 CVBS inputs, BNC interface	
	8 pairs of unbalanced stereo audio input, BNC interface	
	1×ASI input, BNC interface	
Video	Resolution	720×480_60i, 720×576_50i(D1)
		544×480_60i, 544×576_50i(3/4D1)
		352×480_60i, 352×576_50i(HD1)
		480×480_60i, 480×576_50i(2/3D1)
	Encoding	MPEG-2 MP@ML
	Bit-rate	0.8Mbps~19Mbps (each channel)
	Rate Control	CBR/VBR

	GOP Structure	IBBP
	Advanced Pretreatment	De-interlacing, noise reduction, sharpening
Audio	Encoding	MPEG-1 Layer 2
	Sampling rate	48KHz,44.1KHz,32KHz
	Resolution	24-bit
	Bit-rate	64Kb/s~384Kb/s each channel
Multiplexing		Multiplex 1ASI input and 8 channels SD encoding programs
Stream output		2×ASI outputs, BNC interface(support PID filter and pass, support real time monitoring of the output stream.
		IP out SPTS,support IP out null packets filter. RF Out(DVB-C)
System function		LCD/keyboard operating, network management(SNMP), English control interface
		Ethernet software upgrade
General	Dimensions (W×D×H)	482mm×455mm×44.5mm
	Approx weight	3.2
	Temperature range	0~45℃ (Operating), -20~80℃ (Storage)
	Power Requirements	AC 110V±10%, 50/60Hz or AC 220V±10%, 50/60Hz
	Power consumption	25W

### 3. Appearance and Description

#### A、Front Panel

1	LCD display interface
2	Power: power indicator, lighting means the encoder has been powered on
3	Status: Status indicator, lighting means encoder working well
4	Alarm: alarm indicator, lighting means encoder working wrong
5	Left button
6	Up button
7	Down button
8	Right button

9	Menu: Menu button
10	Enter: Enter Button

#### B、 Back Panel

1~8	8 channels HDMI Inputs
9	IP Data out
10	SNMP network interface
11	ASI Input
12、 13	2 Routes ASI Out
14	Power switch
15	Power Socket
16	Grounding pole
17	RF IN
18	RF OUT

## 4. Operation

### Keyboard Function Description:

MENU: Canceling presently entered value, resuming previous setting; Return to previous menu.

ENTER: Activating the parameters which needs modify, or confirming the change after modification.

LEFT/RIGHT: To choose and set the parameters.

UP/DOWN: Modifying activated parameter or paging up/down when parameter is inactivated.

Device Unlock: Press Enter button for 3 seconds

#### A、 Buttons, LCD operation

##### 1、 Power and turn on the encoder

Start up... Please Wait...	ISDBT IP:192.168.0.136
-------------------------------	---------------------------

## 2、 Menu 1

System parameters setting.

#### B、WEB NMS Menu operation

First set the Computer and device in same segment, input device IP address to browser to enter the web nms. Input user name, password(default admin)

#### 1、Message

The screenshot shows the ISDB-T Encoder Web interface. On the left is a navigation menu with options: Message, Encoder (with a minus sign), Encoder 1-8, TS Mux (+), IP Output, RF Output (+), and System (+). The main content area is divided into three sections:

- Input Status:** A table listing 8 encoders with their resolution (48060), bitrate (ranging from 4.78 to 4.82 Mbps), and TS Lock status (all green checkmarks).
- ASI Input:** A table showing the Valid Bitrate for the ASI Input as 34.733 Mbps.
- Output Status:** A table showing output for RF 1, RF 2, and ASI. Each row lists Valid Bitrate, Total Bitrate, and Status (all green checkmarks).
- Device Information:** A table with columns: RunTime (0 Days 02:05:28), Software (0511), Hardware (50.37.A4), Release Date (20170404), and Temperature(°C) (0).

Display the encoding bit-rate, ASI input bit-rate, total bit-rate. Green indicator means device working well, Red indicator means working wrong.

### 3、Encoder1~8

The screenshot shows the ISDB-T Encoder Web interface with the configuration page for Encoder 1-8. The left navigation menu is the same as in the previous screenshot. The main content area shows configuration parameters for Video, Audio, LCN, and Status:

- Video:** Video Rate Mode (CBR), Video Out Resolution (720x576/480), Video Bitrate (5.000 Mbps), Video Ave Bitrate (4.000 Mbps), GOP Structure (IBBPBBP), GOP Size (15), Aspect Ratio (4:3).
- Audio:** Audio Bitrate (128 Kbps), Audio Left Gain (0dB), Audio Right Gain (0dB).
- LCN:** LCN (1).
- Status:** Encoding Bitrate (4.788 Mbps), Video Resolution (720x480 50i), Video Lock (green checkmark), Version (06), Type (CVBS VerA).

Buttons for 'Default' and 'Apply' are located at the bottom right of the configuration area.

Parameters of each channel, when user change the parameters, set parameters well, and click

Apply to modify the parameters.

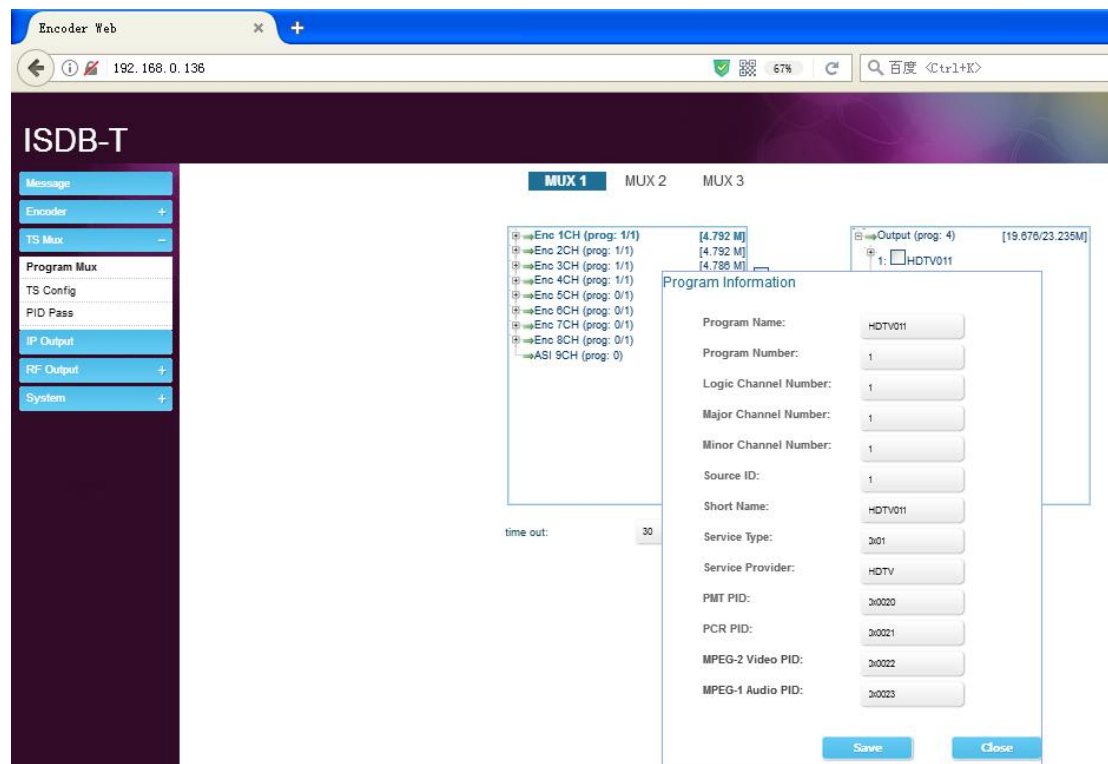

## 5、TS Mux

ASI input, click  to refresh, search the input ASI signal, like the following screenshot:

Multiplex the programs of ASI input, choose the programs, and click  to multiplex the program to the output. If user need to delete the program which has been multiplexed, choose the program from the output, click  to cancel the program, like the following screenshot:

If user need to modify the info of Output Program, click the program name, like the "Digital 1", after user modified the parameters, click Save to modification. Like the following screenshot:
